EDUCATION

Seneca Polytechnic

Honours Bachelor of Technology, Software Development

Toronto, ON

Aug. 2026

- Computer Science coursework: Machine Learning (AI for Software Developers) · High Performance Computing · Parallel Algorithms · Computer Vision · Linux/Unix Systems Programming · Operating Systems · Data Structures & Algorithms · Cloud Web Programming

EXPERIENCE

Seneca Polytechnic — INNWIL Lab | VYBE Platform

Backend Software Developer Intern (Academic WIL)

Toronto, ON

Feb 2026 – Apr 2026

- Built Python FastAPI REST services for the VYBE platform, moving heavy extraction off client paths.
- Automated GitHub Actions CI/CD with tests and review gates, standardizing service releases through the production pipeline.
- Documented deployment tradeoffs in Confluence and coordinated Agile sprints with technical and non-technical partners.

Seneca Polytechnic — ITS

ITS Student HyFlex Ambassador + Lab Monitor

Toronto, ON

Aug 2025 – Nov 2025

- Supported 30+ HyFlex classrooms with Windows and Linux troubleshooting, projectors, and audio peripherals across lab spaces.
- Installed operating systems and classroom devices, then logged incidents and escalations through ITIL support procedures.
- Documented HyFlex steps and trained faculty on classroom setup, reducing repeat support tickets.

Project Human City

Backend Software Developer (Freelance)

Toronto, ON

May 2025 – Jul 2025

- Integrated third-party REST APIs into production services, translating external payloads into stable contracts for mobile and web clients.
- Built TypeScript React features against shared backends.
- Fixed backend defects during release cycles and restored reliability for community-facing endpoints under live traffic.

Three of Cups

Software Engineer (Freelance)

Toronto, ON

Feb 2024 – Apr 2024

- Designed normalized PostgreSQL schemas and reviewed execution plans to remove slow SQL paths on shared request workloads.
- Refactored synchronous backend work into asynchronous background jobs, moving timeouts out of the request path.
- Used query optimization and database design across 2 freelance client engagements, then validated changes with repeatable checks.

PROJECTS

VertexFlow | [GitHub](#) | *Distributed Workers, Docker, Linux Compute*

2025

- Engineered a 4-service Turborepo platform with a Python FastAPI worker and Dockerized job runner on Linux compute.
- Implemented Redis-backed BullMQ queues and direct-to-Cloudflare R2 uploads with signed URLs, separating CPU-heavy processing from the API request path.

BetterMind | [GitHub](#) | *Machine Learning Inference, PostgreSQL*

2025

- Built Machine Learning inference pipelines with OpenAI APIs for sentiment scoring and pattern detection, persisting JSONB evidence for downstream serving.
- Designed a 13-table Prisma/PostgreSQL schema with composite UNIQUE constraints, storing inference outputs as durable records.

SKILLS

Languages: SQL, Python, TypeScript

Infra & Tools: GitHub Actions, Linux/Unix, Git, Docker, Redis

Frameworks: FastAPI, React, Next.js, Prisma, tRPC

Cloud & Data: PostgreSQL, REST APIs, CI/CD, Database Design, Query Optimization

ACHIEVEMENTS

- Awarded a \$2,000 scholarship for academic excellence by Seneca Polytechnic — received twice.
- Reached the finals of the Seneca Polytechnic Hackathon with a working software prototype.
- Designed and delivered 10+ freelance and personal software projects for real clients, from web platforms to mobile apps.
